For now, the list includes Google Pixel Phones and Samsung S7, S8 and Note 8. At this point, you should see thousands of different products divided into categories such as top picks, electronics, living room, kitchen and tables. Amazon had tested the AR functionality before the launch of AR View in 2017. Using the Touch gestures, you can move it or rotate it until you find the perfect point. Naturally, it's Amazon, so once you find something you like, Å You can buy it directly in the app and send it to you as quickly as possible. Now, the same functionality is coming on Android, starting from a handful of high-end phones. Here you need to know about Amazon's AR view, whether you have just received the update on Android or that you are finally going to Check it with IOS.COME AR VIEW FUNCTIONALE AMAZON Augmented Realty Technology is easy and fast. This button will appear under the suitable furniture products in the Amazon purchases app for iOS and desktop web browsers. Like any other thing that makes the company, the point here is to make you buy more stuff, but in this case Åj i even rather cool. What Android phones can use AR View? AR View works only on Android because Google has released its Arcore 1.0 software last week, and this means that it is limited to a small handful of smartphones. Image Credits: Amazon The function is available on thousands of furnishing products available on Amazon, including those offered by both Amazon and some of its third-party suppliers. The retailer says he found the customers who wanted to view the products a They, even when they were not at home or in the room, which is why he added the possibility of continuing to view and organize the products in the saved photos.
